

Scalable Vector Graphics A Revolutionary Web Standard

Glen H. Gersten
CEO, Ideaburst

Ever wish you could have complete control of how your web page looks? That you could easily use downloadable fonts, dynamically generate graphics from a database, create time-based animations, print your web page at printer resolution, use standard filter effects to create drop shadows or lighting effects on any graphic or text, or tweak your graphics with your favorite text editor? Well, the World Wide Web Consortium has just granted your wish with the Scalable Vector Graphics (SVG) 1.0 specification.

In his presentation, Gersten will not only discuss the capabilities of SVG, he'll show you how easily SVG graphics can be created and manipulated, review some of the current tools available for SVG development, and show a number of fully functional SVG applications that demonstrate how this new standard is about to change the face of the web.

Presented Wednesday, October 10, 2001, by the Silicon Valley WebGuild
Silicon Valley Chapter of the Association of Internet Professionals

Location: Cypress Semiconductor
3939 N. First St. (north side of Building 3)
San Jose, CA 95134
Located between Hwy. 237 and Tasman Drive
