

E-Biz Empire Strikes Back: Part III

Next Generation Security Technology

Speakers: Dr. Edward M. Cheng, Mr. Won Lee, Mr. Steve Hong

The September 11 terrorist attacks on the United States changed the way the world conducts business. Companies around the world have realized the need for additional security – both network security (internal) and access control security (external). Biometrics security answers the need. Current password security methods fall short, especially when conducting business over the Internet, because it is vulnerable to theft and fraud. Biometric security has no such weaknesses. Biometric security is fast, accurate, widely accepted and, most important, extremely secure. In addition, new biometric solutions are also affordable, providing security at a fraction of the old cost. In this presentation, you will learn about some of the most advanced and readily available biometric technologies and the privacy issues associated with them.

About the Speaker
